Võ Quang Thành

Junior Full-stack Developer

Email: voquangthanh2004@gmail.com
Mobile: +84 363276943
Portfolio: quangthanhdev.vercel.app
GitHub: github.com/vqt2129a

EDUCATION

Binh Duong Economics and Technology University — Ho Chi Minh City
Bachelor of Software Engineering — **GPA**: 3.25/4.0

SKILLS

- Programming Languages: C#, JavaScript, TypeScript, Python, SQL
- Frameworks & Libraries: ASP.NET Core, ASP.NET MVC, ReactJS, Next.js (basic), NestJS (basic)
- Databases: SQL Server, PostgreSQL
- Tools & Technologies: Docker, Git/GitHub, Postman
- Languages: Vietnamese (Native), English (Technical Reading & Documentation)

EXPERIENCE

ITECCOM Technology Company Limited — Ho Chi Minh City

Fresher Full-stack Developer — 10/2025 – 03/2026

- **Digital Signature Platform:** Designed and implemented a .NET-based digital contract signing platform supporting both single and bulk operations, addressing scalable document processing needs. Developed end-to-end lifecycle management including signer configuration, PDF mapping, dynamic signature placement (image & USB Token), and automated notifications. Architected backend services and optimized SQL Server schemas to handle complex multi-step transactions, reducing manual processing time by 40% and improving system reliability under high-load scenarios.

- **Saigontourist Enterprise CRM:** Enhanced and maintained enterprise CRM systems for loyalty programs and member card management, ensuring reliable customer data operations. Engineered backend services to extract and synchronize near real-time transaction data from the Data Warehouse (DW), reducing data latency and improving data consistency across systems. Optimized data processing workflows using .NET and SQL Server to support high-volume transactions, ensuring stable performance under concurrent workloads.

- **BMWindows Internal Portal & CMS:** Developed an internal App Launcher portal and Admin CMS using .NET to centralize and manage system resources such as application links, icons, and statuses. Designed modular architecture and structured data models to improve maintainability and scalability. Streamlined system administration workflows, enhancing usability and reducing manual configuration overhead.

Computing Community and Technology Corporation — Ho Chi Minh City

Intern Full-stack Developer — 08/2025 – 10/2025

- **Admin Web Application (CMS):** Developed an end-to-end full-stack Content Management System (CMS) using ReactJS and ASP.NET Core to manage articles and user accounts, addressing the need for efficient content administration. Designed and integrated secure RESTful APIs with JWT authentication and role-based access control to ensure data security and user session management. Implemented dynamic data rendering with pagination and filtering, supported by a structured SQL Server database, improving usability and enabling efficient handling of large datasets.

PROJECTS

AI Text-to-SQL Service (Solo Project, Active Development) | *React, Python, FastAPI, PostgreSQL, Docker*

- Demo: ai-texttosql.onrender.com
- Github: github.com/vqt2129a/AI-TextToSQL
- Developed an AI-powered system that converts natural language into SQL queries, improving data accessibility for non-technical users.
- Designed and implemented backend services using FastAPI, integrating LLM APIs with prompt engineering to generate accurate and executable queries.
- Built a responsive React-based UI for query input and result visualization, enhancing user experience.
- Containerized the application using Docker to ensure consistent deployment and scalability.
- Enabled non-technical users to query databases using natural language, reducing dependency on manual SQL writing.

Personal Portfolio Website (Solo Project) | *React, TypeScript, Tailwind CSS, Three.js*

- Demo: quangthanhdev.vercel.app
- Github: github.com/vqt2129a/portfolio-2026
- Built a personal portfolio website to present fullstack projects and technical skills.
- Developed reusable components and modular structure using React and custom hooks to improve maintainability.
- Integrated 3D elements using Three.js to enhance UI interaction and create a more engaging user experience.
- Improved project visibility by consolidating demos, GitHub repositories, and technical descriptions into a single platform.
