EDUCATION

Binh Duong Economics and Technology University — Ho Chi Minh City
Bachelor of Software Engineering — **GPA**: 3.25/4.0

SKILLS

- Programming Languages: C#, JavaScript, TypeScript
- Frameworks & Libraries: ASP.NET Core, ASP.NET MVC, ReactJS (basic), Next.js (basic), NestJS (basic)
- Databases: SQL Server, PostgreSQL
- Tools & Technologies: Docker, Git/GitHub, Postman
- Languages: Vietnamese (Native), English (Technical Reading & Documentation)

EXPERIENCE

Freelance Full-stack Developer — Ho Chi Minh City

Driving School Web Portal | daotaolaixehiepthanh.vn — 04/2026 – 06/2026

Built an end-to-end web system comprising an SEO-friendly public landing portal (.NET 9 MVC), an Admin SPA Dashboard (ReactJS, Vite), and a centralized Backend API (Node.js, Prisma, SQL Server) to streamline course registrations and website content management.

- **Developed a responsive Single Page Application** (SPA) Admin Dashboard using React 18, Vite, and Tailwind CSS, integrating rich-text editors to manage course offerings, news articles, instructor profiles, and dynamic banners.
- **Configured client-side navigation** with React Router v7 and centralized Axios interceptors to manage JWT authentication flow, token storage, and secure, role-based route protection.
- **Designed and implemented the RESTful API & database schema** on SQL Server using Prisma ORM, implementing soft deletes, transaction validation logic, and password hashing with Bcryptjs.
- **Architected server-side rendered public pages** using ASP.NET Core 9 MVC, connecting to the Node.js API via HttpClient and implementing custom Action Filters, slug-based routing, and dynamic Open Graph/Meta tags to maximize SEO performance.

ITECCOM Technology Company Limited — Ho Chi Minh City

Fresher Full-stack Developer — 10/2025 – 03/2026

- **Digital Signature Platform:** Designed and implemented a .NET-based digital contract signing platform supporting both single and bulk operations, addressing scalable document processing needs. Developed end-to-end lifecycle management including signer configuration, PDF mapping, dynamic signature placement (image & USB Token), and automated notifications. Architected backend services and optimized SQL Server schemas to handle complex multi-step transactions, reducing manual processing time by 40% and improving system reliability under high-load scenarios.

• **Saigontourist Enterprise CRM:** Enhanced and maintained enterprise CRM systems for loyalty programs and member card management, ensuring reliable customer data operations. Engineered backend services to extract and synchronize near real-time transaction data from the Data Warehouse (DW), reducing data latency and improving data consistency across systems. Optimized data processing workflows using .NET and SQL Server to support high-volume transactions, ensuring stable performance under concurrent workloads.

• **BMWindows Internal Portal & CMS:** Developed an internal App Launcher portal and Admin CMS using .NET to centralize and manage system resources such as application links, icons, and statuses. Designed modular architecture and structured data models to improve maintainability and scalability. Streamlined system administration workflows, enhancing usability and reducing manual configuration overhead.

Computing Community and Technology Corporation Ho Chi Minh City

Intern Full-stack Developer 08/2025 – 10/2025

• **Admin Web Application (CMS):** Developed an end-to-end full-stack Content Management System (CMS) using ReactJS and ASP.NET Core to manage articles and user accounts, addressing the need for efficient content administration. Designed and integrated secure RESTful APIs with JWT authentication and role-based access control to ensure data security and user session management. Implemented dynamic data rendering with pagination and filtering, supported by a structured SQL Server database, improving usability and enabling efficient handling of large datasets.

PROJECTS

Personal Portfolio Website (Solo Project) | *React, TypeScript, Tailwind CSS, Three.js*

• Demo: quangthanhdev.vercel.app
• Github: github.com/vqt2129a/portfolio-2026
• Built a personal portfolio website to present fullstack projects and technical skills.
• Developed reusable components and modular structure using React and custom hooks to improve maintainability.
• Integrated 3D elements using Three.js to enhance UI interaction and create a more engaging user experience.
• Improved project visibility by consolidating demos, GitHub repositories, and technical descriptions into a single platform.
